

# STORM DAMAGE ASSESSMENT TRAINING

## A Practical Guide for Roofers

**Presented by:** CORE Forensics

**Format:** In-person workshop (2 hours + Lunch)

**Audience:** Commercial contractors, sales; estimating teams, owners, facility managers

### Why Attend:

- **Bridge experience, education, and knowledge:**  
Learn the three keys to expertise in storm damage assessment.
- **Defensible inspections:**  
Document damage in ways insurers, attorneys, and clients will trust.
- **Hands-on, practical skills:**  
Apply checklists, case examples, and ASTM-aligned testing protocols.
- **Credibility through science:**  
Enhance your professional reputation with methods backed by independent lab analysis.

### Learning Objectives:

- Discuss storm damage assessments for hail, tornadoes, hurricanes, and windstorms across major roof systems.
- Review proper documentation processes - chain of custody, photo sets, and report writing.
- Identify on-site and forensic testing protocols and recognize emerging technology.
- Understand assessment findings for root cause and recommend repair/replace options.

## Basic Course Outline

- Introduction
- Storm Damage Assessment Process
- Identifying Storm Damage
- Documentation Process
- Technology in Assessments
- Forensic Sample Testing
- Report Writing & Damage Estimation
- Conclusion & Q&A

## Description of Workshop

This session will provide participants with real-world examples and techniques for identifying hidden wind, hail, and water damage on all major types of roof systems. State-of-the-art technology use and knowledge that provides collecting and reporting on damage assessment with proven protocols will ensure participants understand the topic at a practical skill level. The key tools, technology, and protocols to be presented are based on decades of combined experience.

## Speakers

**Don Lamont** – Founder, CORE Forensics  
NRCA Certified Trainer  
Registered Roof Observer  
Certified Drone Thermographer

**Joe Combs**, RRO & Project Director  
CORE Forensics
